

PUBLIC HEALTH REPORTS.

VOL. XXVI.

SEPTEMBER 22, 1911.

No. 38.

THE CHOLERA SITUATION.

The extension of cholera in southern Europe continues. The presence of the disease has been officially reported in Roumania at Braila on the Danube River, and in Spain in the Province of Tarragona. In Italy cases have recently been reported in Milan city and Province.

No case of cholera has arrived at a port of the United States since the one reported as arriving at New York on the steamship *Re d'Italia* August 18, 1911. The last cholera bacillus carrier detected among immigrants at quarantine also arrived August 18 on the same vessel.

NEW YORK.

Passed Asst. Surg. von Ezdorf reports that bacteriological examination of steerage passengers, for the detection of cholera bacillus carriers proved negative for the steamships *Mendoza*, from Genoa, Naples, and Palermo, which arrived at New York September 8; the *San Giorgio*, from Naples and Palermo, arrived September 12; the *Oceania*, from Trieste, Patras, Almeria, Spain, and Algiers, arrived September 12; and the *Prinzess Irene*, from Naples and Gibraltar, arrived September 13.

PELLAGRA: AN INVESTIGATION OF A LOCAL OUTBREAK IN KENTUCKY.

By R. M. GRIMM, Assistant Surgeon, United States Public Health and Marine-Hospital Service.

The following is a brief report upon an investigation of a "local outbreak" of pellagra, which occurred in southeastern Kentucky during the spring and early summer of 1911. The investigation was brought about by the appearance or by the recognition of a large number of cases of pellagra in this section of the State at this time. It was conducted under orders of the Surgeon General of the Public Health and Marine-Hospital Service and upon the request of the secretary of the State Board of Health of Kentucky and the Representative from the congressional district in which the cases occurred. The time spent upon the investigation was from August 12 to August 30, 1911, and during this time the pellagra situation was looked into in the counties of Whitley, Knox, and Bell.

These three counties are located in the southeastern portion of Kentucky along the Tennessee and Virginia lines, which is the most mountainous section of the State. Each county is traversed by the

Cumberland River, which flows in a tortuous course through and around their many hills. The tributaries of this river and their numerous branches of creeks and runs form an irregular network of streams throughout these counties. A glance at a topographical map of this section will show the extreme irregularity of contour of the country and the scarcity of level land, which explains the presence of the multitude of small streams and the absence of many large ones. In addition to these permanently flowing streams, there are back among the hills many of the "wet-weather" type, which flow only during the winter, spring, and early summer. The country is dotted with numerous springs, some of which flow throughout the year while others become dry during the summer or have only a small flow.

The water supply of the towns and rural districts is of course abundant, and in no instance does the water have to be conducted any great distance for use. Wells have been sunk at various places, but the majority of the people use surface water for general use.

The investigation was conducted with the help of the various county officials and of many local physicians, who rendered invaluable assistance in the collection of the following data:

WHITLEY COUNTY.

It was learned from Dr. E. S. Moss, of Williamsburg, health officer of the county, that pellagra had been present in Whitley at least since 1907, and that at that time a case of pellagra was recognized and diagnosed as such. Since 1907 the number of recognized cases of pellagra in this county has increased each year and the physicians are becoming more and more familiar with the disease and are on the lookout for it.

On account of the fact that the cases of pellagra in Whitley County are widely scattered and that many of them are in persons living in places difficult of access I was unable to visit all of them at their homes and had to depend largely upon the reports of physicians who had seen or treated them. The number of cases which were either seen by me or reported to me by physicians is as follows:

A. Cases of pellagra in Whitley County:		
(1) Diagnosis positive.....	¹ 32
(2) Diagnosis probable.....	5
B. Reported deaths of known pellagrins.....	² 9

KNOX COUNTY.

I was informed by Dr. J. S. Lock, of Barbourville, health officer of the county, that pellagra had been recognized by the physicians in Knox County only since the spring or early summer of 1911. The death of two women at this time from a disease which was not diagnosed brought on a discussion, which, considered with reports of cases of pellagra from other counties, led to the recognition of the disease in Knox County. It is certain, however, that pellagra existed in this county before the date of its recognition, as a number of the cases that I visited in the county gave histories dating back three or

¹ Cases were diagnosed positive only when the three cardinal sets of symptoms were present or when there was a definite history of them.

² It was learned that 12 deaths had previously been reported from this county, but definite information could be obtained of only 9.

four years. Dr. W. Burnside, of Barbourville, stated to me that he is confident that he treated a patient in 1901 for symptoms which he now recognizes to have been those of pellagra.

As far as I have been able to determine the number of cases of pellagra which have been recognized in Knox County up to the present time is as follows:

A. Cases of pellagra in Knox County:	
(1) Diagnosis positive.....	30
(2) Diagnosis probable.....	2
B. Reported deaths of known pellagrins.....	4

BELL COUNTY.

The exact date of the recognition of pellagra in Bell County is indefinite. It seems to have been first recognized there during the spring of 1911, although a number of physicians remember having treated cases before this date which they now know were cases of pellagra. A case was related to me by Dr. O. P. Nuckols, of Straight Creek, which was seen by him in the summer of 1910 and which had shown symptoms during the summer of 1909.

The first public recognition of the presence of pellagra in Bell County was made at the regular July meeting of the Bell County Medical Society, which was held at Cary on July 7, 1911, upon the invitation of the physicians of the Continental Coal Corporation at that place. The meeting was attended by a large number of county physicians and laymen. Five cases of well-defined pellagra were exhibited by Drs. Hendren and Hastings, of Cary, Ky., who had recognized and diagnosed them in their practice. Following this meeting a considerable amount of interest in the disease was shown by the profession of the county, and a number of cases were at once discovered at other places in the county. A pellagra conference was called by the secretary of the State Board of Health of Kentucky, and was held at Corbin, Ky., on August 9, 1911. This meeting was attended by a large number of physicians and laymen from the surrounding counties. A number of cases of pellagra were shown and the disease was generally discussed. Many cases of pellagra have been seen and recognized since these meetings by physicians who were before that time not familiar with the disease.

The majority of the cases of pellagra which have been recognized in Bell County have been in the mining camps around Pineville and around Middlesborough. The number of cases which have been recognized in Bell County up to the present time is as follows:

A. Cases of pellagra in Bell County:	
(1) Diagnosis positive.....	140
(2) Diagnosis probable.....	13
B. Reported deaths of known pellagrins.....	5

In regard to the number of cases of pellagra in Whitley, Knox, and Bell Counties, Ky., at the present time, my investigation shows the following grand total:

(1) Diagnosis positive.....	102
(2) Diagnosis probable.....	20
(3) Deaths from pellagra.....	18
Grand total.....	140

¹ Two of these have recently died.

The report of 8 cases of pellagra and 1 death from Laurel County was made to me by Dr. M. W. Steele, health officer of Corbin, and 5 cases and 1 death were reported to me from the Tennessee line by Dr. J. G. Moss, of Hartranft, Tenn. The cases in these two reports are not included in the reports from Whitley, Knox, and Bell Counties.

In the consideration of the whole series of 140 cases some generalizations can be made which may be of interest. Practically every case occurred in families in poor economic circumstances and living under rather unhygienic conditions. Many of them were in families of coal miners. On account of the topography of the country the most suitable locations for homes are along the streams, consequently a large percentage of the inhabitants live along watercourses. In every instance where I was able to visit the pellagrins at their homes I found them living within 500 or 600 yards from a stream. A number of them were living in houses situated literally on the banks of the streams. The question of diet was not gone into thoroughly, but in every instance where I was able to make inquiry regarding the diet of the pellagrin it was learned that corn products had been one of the main articles of diet. In fact corn products are used extensively by nearly all of the people in this section.

I was able to find only 16 pellagrins who were then living at the homes at which they were living when they first noted the symptoms of the disease. Upon inquiry as to the water supply in these instances it was found, with only one exception, to be either surface water from branches or creeks or water taken directly from neighboring mountain springs.

Regarding the race, sex, and age of the pellagrins in this series, I have constructed the following table from the data pertaining to these points:

	Number.	Percent- age.	Average age. ¹
White females.....	104	74.3	25.64
White males.....	28	20.0	30.05
Colored females.....	7	5.0	33.00
Colored males.....	1	.7	13.00
Total.....	140	100.0

¹ Reckoned on 93 cases.

Some other observations were made and some other data collected which are not included in the above report, but will probably be used in a subsequent paper on the epidemiology of pellagra.

In conclusion I wish to thank the health officers of Whitley, Knox, and Bell Counties for their valuable assistance and cooperation in this investigation. I am especially indebted to Drs. J. G. Foley, J. Harry Hendren, O. P. Nuckols, L. L. Robinson, and T. H. Curd, of Bell County; to Drs. J. S. Lock, Wilder, and W. Burnside, of Knox County; to Drs. E. S. and C. A. Moss and L. O. Smith, of Whitley County; and to Dr. M. W. Steele, of Corbin. Without their assistance very little could have been done.

UNITED STATES.

MUNICIPAL ORDINANCES, RULES, AND REGULATIONS PERTAINING TO PUBLIC HYGIENE.

[Adopted since Jan. 1, 1910.]

CHELSEA, MASS.

ICE CREAM.

RULE 116. No ice cream shall be manufactured or stored in any portion of a building which is used for the stabling of horses or other animals, or in any room used in whole or in part for domestic or sleeping purposes, unless the manufacturing and storage room for ice cream is separated from other parts of the building to the satisfaction of the board of health.

RULE 117. All rooms in which ice cream is manufactured or stored shall be provided with tight walls and floors and kept constantly clean. The walls and floors of said rooms shall be of such construction as to permit rapid and thorough cleansing. The room or rooms aforesaid shall be equipped with appliances for washing or sterilizing all utensils employed in the mixing, freezing, storage, sale, or distribution of ice cream, and all such utensils after use shall be thoroughly washed with boiling water, or sterilized by steam. Vessels used in the manufacture and sale of ice cream shall not be employed as containers for other substances than ice cream.

RULE 118. All establishments in which ice cream is manufactured shall be equipped with facilities for the proper cleansing of the hands of operatives, and all persons immediately before engaging in the mixing of the ingredients entering into the composition of ice cream, or its subsequent freezing and handling, shall thoroughly wash his or her hands and keep them cleanly during such manufacture and handling. All persons shall be dressed in clean outer garments while engaged in the manufacture and handling of ice cream.

RULE 119. No urinal, water-closet, or privy shall be located in the rooms mentioned in the preceding section, or so situated as to pollute the atmosphere of said rooms.

RULE 120. All vehicles used in the conveyance of ice cream for sale or distribution shall be kept in a cleanly condition and free from offensive odors.

RULE 121. Ice cream kept for sale in any shop, restaurant, or other establishment shall be stored in a covered box or refrigerator. Such box or refrigerator shall be properly drained and cared for, and shall be kept tightly closed, except during such intervals as are necessary for the introduction or removal of ice cream or ice, and they shall be kept only in such locations and under such conditions as shall be approved by the board of health.

RULE 122. Every person engaged in the manufacture, storage, transportation, sale, or distribution of ice cream, immediately on the occurrence of any case or cases of infectious disease, either in himself or in his family, or amongst his employees, or within the building or premises where ice cream is manufactured, stored, sold, or distributed, shall notify the board of health and at the same time shall suspend the sale and distribution of ice cream until authorized to resume the same by the said board of health. No vessels which have been handled by persons suffering from such disease shall be used to hold or convey ice cream until they have been thoroughly sterilized.

RULE 123. All cream, milk, or skimmed milk employed in the manufacture of ice cream shall before use be kept at a temperature not higher than 50° F.

RULE 124. No person, by himself or by his servant or agent or as the servant or agent of any other person, firm, or corporation, shall in the city of Chelsea sell, exchange, or deliver any ice cream which contains more than 500,000 bacteria per cubic centimeter.

RULE 125. No old or melted ice cream, or ice cream returned to a manufacturer from whatever cause, shall again be used in the preparation of ice cream. [Regulation board of health, adopted May 10, 1910.]

PROTECTION OF FOODSTUFFS.

RULE 126. Bakers' products sold or offered for sale in stores in which groceries or other articles are sold shall be kept in a cleanly manner in suitable covered cases or receptacles.

RULE 127. Stores in which bakers' products are the principal articles sold shall be kept in a cleanly condition at all times. Bread, cake, cookies, etc., offered for sale shall be kept covered, as far as possible, to prevent contamination by dust and flies.

RULE 128. No foodstuff which is to be offered for sale shall be stored or kept in any living or sleeping room of any house.

RULE 129. Foodstuffs shall not be exposed in open windows or doorways, or in front of stores, unless properly protected from dust, flies, and animals.

RULE 130. Provisions and foodstuffs of any kind shall not be carried through any street, private way, or public place unless properly protected from dust and flies. [Regulation board of health, adopted May 10, 1910.]

MEDICAL CHESTS.

[Acts of 1907.—Chap. 164, sec. 1.]

Every person, firm, or corporation operating a factory or shop in which machinery is used for any manufacturing purpose, or for any other purpose except for elevators, or for heating or hoisting apparatus, shall at all times keep and maintain free of expense to the employees, such a medical and surgical chest as shall be required by the local board of health of any city or town where such machinery is used, containing plasters, bandages, absorbent cotton, gauze, and all other necessary medicines, instruments, and other appliances for the treatment of persons injured or taken ill upon the premises.

RULE 131. In compliance with the foregoing act of the legislature the Chelsea Board of Health requires the following medical and surgical appliances to be kept and maintained by factories and shops in Chelsea:

- 1 pair of scissors, straight (24-inch blade).
- 1 elastic tourniquet (minimum 24 inches).
- 1 roll 2-inch adhesive plaster.
- 1 dozen 2-inch gauze bandage.
- 1 pound absorbent cotton.
- 1 yard sterile gauze.
- 10 yards canton flannel (used with caron oil for burns).
- 100 tablets 14-grain corrosive sublimate and citric acid.
- 6 whitewood strips, 40 by 4 by 3.16.
- 2 pillows.
- 1 package pins.
- 3 dozen safety pins.
- 4 ounces spirits of ammonia, aromatic (rubber stopple).
- ½ gallon of caron oil.
- 1 pint of brandy.
- 1 pint of sulphonaphthol.

[R. L.—Chap. 104, sec. 41.]

* * * All factories and workshops shall be well lighted, well ventilated, and kept clean. Suitable receptacles for expectoration shall be provided in all factories and workshops by the proprietors thereof, the same to be of such form and construction and of such number as shall be satisfactory to the board of health of the city or town in which the factory or workshop is situated.

RULE 132. In accordance with the foregoing law the board of health requires the following form, construction, and number of receptacles for expectoration in factories and workshops in the city of Chelsea.

Under ordinary conditions 1 cuspidor for every 5 male or every 20 female operatives.

The cuspidor may be of enameled iron or steel or other metal or glazed pottery. It should contain at least 1 inch of water when in use and must be cleaned every day with hot water and the contents flushed into the sewer. [Regulation board of health adopted May 10, 1910.]

COLUMBUS, OHIO.

HOUSING CODE—TITLE 2 (SANITATION).

SEC. 32. Basement and cellar rooms.—In tenement houses and dwelling houses hereafter erected no room in the basement or cellar shall be constructed, altered, converted or occupied for living purposes, other than for cooking or laundry purposes.

SEC. 33. Cellars, and spaces under floors.—When the first floor of any tenement house or dwelling house hereafter erected is occupied, or intended to be occupied,

September 22, 1911

for living purposes, said floor shall be at least 2 feet above the grade of the adjacent ground, and the space beneath such floor shall be inclosed to prevent the accumulation of rubbish, but provided with ample ventilation and adequate drainage. All cellars and basements in such tenement house or dwelling house shall be properly lighted, ventilated and drained in all their parts.

SEC. 34. Courts, areas, and yards.—In every tenement house and dwelling house hereafter erected all courts, areas, and yards shall be properly graded and drained, so that all water may drain freely into the street or sewer. And when necessary to secure such drainage, or to keep such premises in a sanitary condition, such courts, areas, or yards, or such portion thereof as the health department shall order, shall be properly concreted.

SEC. 35. Water and water-closets in tenement houses.—In every tenement house hereafter erected there shall be in each apartment a proper sink with running water. In every such house there shall be within each apartment a separate water-closet, located in the bathroom or in a separate compartment. Each such water-closet shall be placed in a compartment completely separated from every other water-closet; such compartment shall be not less than 3 feet wide, and shall be inclosed with plastered partitions, which shall extend to the ceiling. Every such compartment shall have a window opening directly upon the street or upon a yard or court of the minimum size prescribed in this ordinance. Every water-closet compartment hereafter placed in any tenement house shall be provided with proper means of lighting the same at night. If fixtures for gas or electricity are not provided in said compartment, then the door of said compartment shall be provided with translucent glass panels, not less in area than 4 square feet. The floor of every such water-closet compartment, unless the same be placed in a bathroom, shall be made waterproof with asphalt, tile, stone, or some other nonabsorbing waterproof material; and such waterproofing shall extend at least 6 inches above the floor, so that the said floor can be washed or flushed out without leaking. No drip trays shall be permitted. No water-closet fixtures shall be inclosed with any woodwork. Where in such tenement house there are apartments consisting of but one room, it shall be sufficient to provide one water-closet for each two such apartments. In such case, such water-closet shall not open into any apartment, but shall be accessible through a public hall, and the door thereof shall be provided with lock and keys; and such compartment and water-closet shall comply in all other respects with the provisions of this ordinance.

SEC. 36. Water and water-closets in dwelling houses.—In every dwelling house hereafter erected where public water mains are reasonably accessible such house shall be provided with a proper sink therein, with running water inside the house; and when such water mains are not accessible such house shall have other water, suitable for all domestic uses, supplied either within the house or within 12 feet thereof; and every such house which is also reasonably accessible to a public or private sewer shall be provided with a water-closet inside the house. Such water-closet shall be in a compartment completely inclosed in plastered walls extending to the ceiling, with a window not less than 6 square feet in area opening directly upon the street or upon a yard or court of the minimum dimensions prescribed in this ordinance, and shall not be located in the cellar or basement; provided, that where such house has two or more water-closets one of them may be located in the basement or cellar, and when so located such water-closet and the compartment containing the same shall, in all other respects, comply with the provisions of this section. Where a sewer is not accessible the closet shall consist of a privy vault, located in the yard and constructed in accordance with the ordinances of the city relating thereto; and the structure containing such privy shall be provided with adequate means of ventilation.

SEC. 37. Sewer connection.—No tenement house shall hereafter be erected on any street unless there is city water accessible thereto, nor unless there is a sewer accessible thereto. No cesspool or privy vault or similar means of sewage disposal shall be used in connection with any such tenement house, but every such house shall have its plumbing system connected with a sewer before such house is occupied.

SEC. 38. Plumbing.—In all tenement houses hereafter erected where plumbing or other pipes pass through floors or partitions, the openings around such pipes shall be sealed or made air-tight with plaster or other incombustible material, so as to prevent the passage of air or the spread of fire from one floor to another or from room to room. All plumbing work, except as otherwise specified in this ordinance, shall be in accordance with the plumbing regulations of said city. [Ordinance, adopted Mar. 6, 1911.]

GRAND RAPIDS, MICH.

MILK—REGULATION OF THE SALE OF.

The common council of the city of Grand Rapids doth ordain:

That sections 2, 3, and 9 of an ordinance entitled as aforesaid, be and the same are hereby amended, and one new section added to be known as section 2½, so as to read as follows:

"SEC. 2. Any person or persons desiring to sell, barter, or traffic in milk or cream within the city of Grand Rapids, upon his, her, or their application to the board of health of the city of Grand Rapids, who shall after investigation make its report on each application to the city clerk, recommending the granting or refusing of a license in each case. No license shall be issued by the city clerk except upon favorable report of the board of health. Following a favorable report from the board of health, a license shall be issued to the applicant upon payment to the city clerk of the following license fee and complying with the provisions of this ordinance.

"For the selling of milk or cream from wagon, for each wagon \$5, from a dairy, creamery, or milk company, \$5; from cart pushed or propelled by hand, \$1; from a can carried by hand and for selling from houses, restaurants, and all other places, \$1. Said license shall be revocable by the board of health upon failure of the licensee to comply with the provisions of this ordinance.

"Said license shall not be transferable by the holder thereof and shall continue and be operative until the first Monday in May next ensuing the issuance of the same, unless sooner revoked, and the license fee above provided shall be for the full year or for any part thereof: *Provided, however,* That no fee shall be charged any farmer or other person for such license, who does not sell any milk or cream whatever, except such as he produces from his own cows on his own farm or premises. All persons selling only milk produced on their own premises shall obtain, on application, from the milk inspector, an order on the city clerk for a permit, and on presentation of the same the city clerk shall issue to such applicant a permit without charge.

"SEC. 2½. All persons engaged in the sale, delivery or distribution of milk in the city of Grand Rapids shall furnish the board of health upon proper blanks provided a list of the names and locations of the dairy farms from which the milk so distributed is obtained, and shall before making any changes in their supply, notify the board of health of such intended changes. Any person neglecting to comply with this regulation, or who dispenses milk from any dairy whose milk has been excluded from the city of Grand Rapids by the board, shall have his license revoked.

"SEC. 3. The board of health shall furnish a blank application for milk license which shall require among other things the following information which the applicant shall state fully and explicitly:

"First. The full name, residence and post-office address of said applicant.

"Second. The exact location or place from which said applicant obtained his milk or cream, and if said applicant is not a producer of milk then the name of the person or persons from whom he obtains his milk or cream.

"Third. If the applicant is a producer of milk or cream, the number of cows in his dairy herd, and if not a producer the number of cows in the dairy herd of the person or persons from whom he obtains the same.

"Fourth. The manner in which said applicant intends to dispose of his milk or cream when licensed according to the provisions of this ordinance.

"Such application shall be signed by the applicant or some person authorized to sign for him, her or them, and when received shall be filed with the board of health.

"SEC. 9. When milk tickets shall have been sold and once used by the customer the use of the same thereafter is hereby prohibited.

"All milk sold in bottles must be bottled at the dairy house, creamery, or milk depot and milk must not be put in bottles while on the road. The hauling of milk cans, bottles or other vessels in which milk shall be delivered, to or from the place of delivery in wagons used for hauling manure, swill or in any other unclean vehicle, is hereby expressly prohibited. The temperature of milk when delivered or offered for sale by wholesale must not be higher than 60° F., nor contain more than 200,000 bacteria to the cubic centimeter. The temperature of milk when delivered or offered for sale by retail from wagons must not be higher than 60° F., nor contain more than 200,000 bacteria to the cubic centimeter. The violation of any of the provisions of this section shall subject the offender to the penalties of this ordinance." [Ordinance adopted June 19, 1911.]

PLAQUE-PREVENTION WORK.

PLAQUE-INFECTED RAT FOUND AT SEATTLE, WASH.

A rat found dead at Seattle, Wash., August 26, has been bacteriologically determined to have been plague-infected.

PLAQUE-INFECTED GROUND SQUIRRELS FOUND IN CALIFORNIA.

During the week ended September 2, 1911, the finding of 14 plague-infected ground squirrels was reported. The squirrels were found as follows: In Contra Costa County, Cal., at Peoples Water Co. land, 3 miles east of Stege (Rancho El Sobrante) 8 squirrels found, 1 each on August 10, August 16, August 17, August 18, August 25, August 26, and 2 on September 1; at Peoples Water Co. land, 2½ miles north of Stege (Rancho San Pablo) on Wildcat Creek, 4 squirrels found, 1 each on August 11 and August 21, and 2 on August 30; at Mazone ranch, August 28, 3 miles east of Stege and one-half mile northeast of Sunset View Cemetery, on Wildcat Creek, 1 squirrel; at M. & F. Butterfield ranch, August 26, 3 miles northeast of Ripon, 1 squirrel.

DISTRIBUTION OF POISON.

In connection with the making and maintenance of a squirrel-free zone around the cities of California on San Francisco Bay, 5,234 acres of land in Alameda County and 1,850 acres in Contra Costa County were covered with poison during the week ended September 2, 1911.

During the same period 880 acres of land in San Joaquin County, 730 acres in San Benito County, and 1,146 acres in Stanislaus County were covered with poison for the purpose of eradicating plague foci.

SMALLPOX IN THE UNITED STATES.

In the following tables the States indicated by an asterisk are those from which reports of smallpox are received only from certain city, and in some cases county, boards of health. In these States, therefore, the recorded cases and deaths should not be taken as showing the general prevalence of the disease. In the States not marked by an asterisk the reports are received monthly from the State boards of health and include all cases reported throughout the State.

Reports Received During Week Ended Sept. 22, 1911.
